# Quantum groups as hidden symmetries of quantum impurities

**Enderalp Yakaboylu (IST Austria)**

**Host: Laszlo Erdős**

We present an approach to interacting quantum many-body systems based on the notion of quantum groups, also known as  $q$ -deformed Lie algebras. In particular, we show that if the symmetry of a free quantum particle corresponds to a Lie group  $G$ , in the presence of a many-body environment this particle can be described by a deformed group,  $G_q$ . Crucially, the single deformation parameter,  $q$ , contains all the information about the many-particle interactions in the system. We exemplify our approach by considering a quantum rotor interacting with a bath of bosons, and demonstrate that extracting the value of  $q$  from closed-form solutions in the perturbative regime allows one to predict the behavior of the system for arbitrary values of the impurity-bath coupling strength, in good agreement with non-perturbative calculations. Furthermore, the value of the deformation parameter allows to predict at which coupling strengths rotor-bath interactions result in a formation of a stable quasiparticle. The approach based on quantum groups does not only allow for a drastic simplification of impurity problems, but also provides valuable insights into hidden symmetries of interacting many-particle systems.

**Thursday, December 20, 2018 04:00pm - 06:00pm**

IST Austria Campus Big Seminar room Ground floor / Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the IST Shuttle from and to Heiligenstadt Station. Please find a schedule of the IST Shuttle on our webpage: [http://ist.ac.at/fileadmin/user\\_upload/pdfs/IST\\_shuttle\\_bus.pdf](http://ist.ac.at/fileadmin/user_upload/pdfs/IST_shuttle_bus.pdf) The IST Shuttle bus is marked IST Shuttle (#142) and has the Institute Logo printed on the side.
