A variational characterisation of the Sine_β point process

Martin Huesmann (Universität Wien)

Host: M. Beiglböck, N. Berestycki, L. Erdős, J. Maas

The Sine_β point process is a stationary point process that appears as the limit of a certain system of interacting particles with a logarithmic repulsion, the so called one-dimensional log-gas. In this talk, we give a characterisation of the Sine_β process as the unique minimizer of a free energy functional. Our argument is based on the combination of optimal transport ideas for point processes and approximation techniques for log-gases (screening).

Tuesday, April 9, 2019 03:30pm - 04:30pm

IST Austria Campus Uni Wien, HS 11, 2. OG, OMP 1

This invitation is valid as a ticket for the IST Shuttle from and to Heiligenstadt Station. Please find a schedule of the IST Shuttle on our webpage: <https://ist.ac.at/en/campus/how-to-get-here/> The IST Shuttle bus is marked IST Shuttle (#142) and has the Institute Logo printed on the side.
