Control of microtubule dynamics: seeing proteins and drugs in action

Anna Akhmanova (Utrecht University)

Host: Michael Sixt

Tight control of microtubule dynamics is essential for many cellular processes, including cell division, migration and morphogenesis. Using *in vitro* reconstitution experiments, we explored the detailed mechanisms of such regulation by proteins that interact with microtubule plus ends. Furthermore, we used assays with fluorescent analogues of microtubule-stabilizing and destabilizing agents to directly visualize their effects on microtubule polymerization. We found that a single molecule of a microtubule-depolymerizing drug bound to the microtubule tip was sufficient to trigger a catastrophe, whereas microtubule rescue and stabilization required local accumulation of multiple drug molecules. Our results illustrate the diversity and complexity of mechanisms controlling microtubule growth and organization.

Friday, December 13, 2019 11:00am - 12:00pm

IST Austria Campus Mondi Seminar Room 1, Central Building

This invitation is valid as a ticket for the IST Shuttle from and to Heiligenstadt Station. Please find a schedule of the IST Shuttle on our webpage: <https://ist.ac.at/en/campus/how-to-get-here/> The IST Shuttle bus is marked IST Shuttle (#142) and has the Institute Logo printed on the side.
