Randomly coupled differential equations and non-Hermitian random matrices

David Renfrew

IST Austria

Host: M. Beiglboeck, N. Berestycki, L. Erdős, J. Maas

We consider large random matrices, whose entries can contain non-trivial correlations and possibly different variances, and compute the limiting support of their eigenvalues, as well as the trace of $f(X)g(X^*)$ for analytic test functions f and g . We then consider applications to long time asymptotics for systems of critically coupled differential equations with random coefficients.

Tuesday, November 26, 2019 04:30pm - 05:30pm

IST Austria, Heinzl SR / Ground floor, Office Bldg West (I21.EG.101)

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
