

## Physical Sciences Seminar

# Spectral gaps in quantum spin systems

**Marius Lemm**

Harvard University

Host: Robert Seiringer

Quantum spin systems are many-body models which are of interest in modern physics and at the same time amenable to rigorous mathematical analysis. A central question about a quantum spin system is whether its Hamiltonian operator exhibits a spectral gap above the ground state. The existence of a spectral gap has far-reaching consequences for the low-energy physics and the ground state complexity. In this talk, we survey recent progress on deriving spectral gaps for frustration-free quantum spin systems in dimensions greater than 1, e.g., in antiferromagnetic models of Affleck-Kennedy-Lieb-Tasaki (AKLT).

**Monday, January 27, 2020 10:00am - 11:00am**

Mondi Seminar Room 2, Central Building

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
