

Life Sciences Seminar

Dissection of cortical circuits and mechanisms underlying nociception and pain in rodent models.

Linette Tan

University of Heidelberg

Host: Sandra Siegert

Chronic pain is a global health problem that remains inadequately understood and poorly managed by current existing therapies. Although decades of functional human imaging studies have shown that the overall pain experience results from a collective output activity arising from a matrix of brain networks including the sensory, cingulate and prefrontal cortices, understanding the circuits and cellular contributions towards pain chronicity have only recently began to emerge. Using multidisciplinary approaches such as optogenetics, chemogenetics, imaging, in vivo electrophysiology and functional activity mapping, I will discuss the specificity and functional causality of novel pathways and mechanisms of nociceptive processing in the brain.

Tuesday, March 3, 2020 10:00am - 11:00am

Mondi Seminar Room 2, Central Building

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
