

Institute colloquium

Phase of fat: Mechanisms and physiology of neutral lipid storage

Tobias Walther

Harvard University

Host: Michael Sixt

The Phase of Fat: The mechanisms and physiology of fat storage Robert V. Farese, Jr.¹ and Tobias C. Walther^{1,2} ¹ Harvard Medical School, Harvard T.H. Chan School of Public Health ² Howard Hughes Institute of Medical Sciences All organisms face fluctuations in the availability and need for metabolic energy. To buffer these fluctuations, cells use neutral lipids, such as triglycerides, as energy stores. We study how lipids are stored as neutral lipids in cytosolic lipid droplet organelles. Specifically, we investigate the molecular processes that govern the synthesis of energy storage lipids as well as their storage in and mobilization from lipid droplets. In modern societies, individuals often face metabolic energy excess, leading to metabolic diseases. We will present our studies on the causal link between energy excess and metabolic disease.

Monday, October 23, 2017 04:00pm - 05:00pm

Raiffeisen Lecture Hall, Central Building

This invitation is valid as a ticket for the ISTA Shuttle from and to Heiligenstadt Station.

Please find a schedule of the ISTA Shuttle on our webpage:

<https://ista.ac.at/en/campus/how-to-get-here/> The ISTA Shuttle bus is marked ISTA Shuttle (#142) and has the Institute Logo printed on the side.
