ELLIS talk

Multilingual (Spoken) Machine Translation based on Language-Specific Encoders/Decoders

Marta Ruiz Costa Jussa

Polytechnic University of Catalonia

Host: Marco Mondelli

Multilingual Machine Translation has a considerable impact on our everyday communication, and many online free automatic tools provide competitive translations. However, there are many challenges in the race towards achieving high-quality and non-biased translations for all languages. In this talk, we will introduce our proposed multilingual spoken machine translation architecture based on language-specific encoders/decoders, which allows incrementally adding new languages and zero-shot spoken translation. We evaluate this architecture in terms of translation quality and gender bias accuracy.

Wednesday, June 2, 2021 04:00pm - 06:00pm
Zoom Meeting
