A new approach to the Berezinskii–Kosterlitz–Thouless transition in the planar XY model

Marcin Lis (Uni Wien)

Host: M. Beiglböck, N. Berestycki, L. Erdös, J. Maas, F. Toninelli

We present a new proof of the BKT phase transition in the spin XY (planar rotor) model on any planar lattice — a result first established by Fröhlich and Spencer in 1981. Our approach is quite elementary. It does not go through the analysis of vortices but rather through the dual integer-valued height function. We use a recent result of Lammers on delcoalization of general height functions together with a new loop representation of spin correlations in the XY model, that we believe to be of independent interest. This is joint work with Diederik van Engelenburg.

Thursday, September 30, 2021 02:00pm - 02:50pm
IST Austria Campus Rényi Institute Budapest

This invitation is valid as a ticket for the IST Shuttle from and to Heiligenstadt Station. Please find a schedule of the IST Shuttle on our webpage: https://ist.ac.at/en/campus/how-to-get-here/ The IST Shuttle bus is marked IST Shuttle (#142) and has the Institute Logo printed on the side.
